PROFESSIONAL SUMMARY

Recent B.Tech (CSE) graduate with hands-on experience across AWS and Azure cloud platforms. Skilled in CI/CD automation (Azure DevOps), containerization (Docker, Kubernetes, Helm), and Infrastructure as Code (Terraform). Proficient in monitoring and logging using Prometheus, Grafana, and Azure Monitor, with strong Linux and networking fundamentals. Brings a rare fresher advantage of multi-cloud, end-to-end DevOps toolchain exposure. Seeking a Cloud/DevOps Engineer role to apply these skills and grow into scalable infrastructure challenges.

PROJECTS

Electro GO — CI/CD Deployment on Microsoft Azure

Tools: Azure DevOps, Terraform, Azure Repos, ASP.NET Core, Nginx, Ubuntu Linux, Azure (VM, VNet, NSG, Load Balancer, MySQL Flexible Server, Storage Account)

- Designed the CI pipeline in Azure DevOps to restore, build, test, and publish the ASP.NET Core app, pushing artifacts to Azure Artifacts as Universal Packages.
- Authored Terraform modules (network, compute, database, load balancer) to provision Azure infrastructure — VNet, subnets, NSGs, Ubuntu VM, MySQL Flexible Server, and Load Balancer — as reusable, version-controlled code.
- Built the CD (Release) pipeline to auto-provision infrastructure via Terraform and deploy the app to the VM over SSH, validating deployment through live application and database connectivity checks.
- Collaborated on source control practices in Azure Repos, ensuring smooth integration between application and infrastructure code.

3-Tier Banking Web Application — Manual Deployment on AWS

Tools: AWS (VPC, EC2, RDS MySQL, ALB, Security Groups, NAT Gateway, IGW), NGINX, Python/Flask, Gunicorn, systemd, Ubuntu Server 24.04 LTS, Git/GitHub

- Architected and manually provisioned a 3-tier AWS infrastructure — VPC with public/private subnets, Internet/NAT Gateways, and tier-specific Security Groups (ALB, Bastion, Web, App, DB) — to isolate and secure the Web, Application, and Database layers.
- Deployed the Flask application on EC2 using Gunicorn (via systemd) with NGINX as a reverse proxy, and provisioned Amazon RDS MySQL in a private subnet with public access disabled.
- Configured an Application Load Balancer with target group health checks for traffic distribution, and validated end-to-end connectivity across all tiers (Signup → Login → Dashboard → Logout).

TECHNICAL SKILLS

- CI/CD & Automation:** Azure DevOps, Bash Scripting
- Containers & Orchestration:** Docker, Docker Compose, Kubernetes (K8s), Helm Charts, Container Registry (DockerHub, ECR)
- Cloud Platforms:** Azure (VNet Peering, NSG, Load Balancer, App Gateway, App Service, VMSS, Storage Account, Azure Monitor); AWS (EC2, S3, VPC, EKS, CloudWatch)
- IaC & Config Mgmt:** Terraform, Azure ARM Templates (basic)
- Monitoring & Logging:** Prometheus, Grafana, Azure Monitor
- Version Control & OS:** Git, GitHub, Linux (Ubuntu), Nginx
- Networking & Security:** TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, VNet, Network Security Groups, SSH

EDUCATION

Bachelor of Engineering — Computer Science & Engineering

(2021 – 2025)

VSM College of Engineering, Ramachandrapuram (Affiliated to JNTUK)

ACHIEVEMENTS

- Bronze Medalist, Rural Federation Games of India (Chennai), representing Andhra Pradesh; competed among 200+ athletes at the Acharya Nagarjuna University state-level event.
- Bronze Medalist in Kho Kho, CBSE South Cluster Zone (Rajahmundry).

CERTIFICATIONS

- The Joy of Python (NPTEL)
